Turkey River Watershed Partnership

Conservation practices to reduce
nutrient loss and improve water quality

What is RCPP?

The Regional Conservation Partnership Program (RCPP) promotes coordination of NRCS conservation activities with partners that offer value-added contributions to expand our collective ability to address on-farm, watershed, and regional natural resource concerns. Through RCPP, NRCS seeks to co-invest with partners to implement projects that demonstrate innovative solutions to conservation challenges and provide measurable improvements and outcomes tied to the resource concerns they seek to address.

Partnership

Through the implementation of priority conservation practices the Turkey River Watershed project will reduce nitrogen and phosphorus loads and improve water quality of the Turkey River.

Eligible Practices

The project establishes an approach for private sector conservation planning support for practices such as:

- Constructed Wetland
- Cover Crop
- Denitrifying Bioreactor
- Grassed Waterway
- Residue and Tillage Management, No Till
- Saturated Buffer
- Water and Sediment Control Basin

More Information

For more information about RCPP or other conservation planning and financial assistance opportunities, contact your local NRCS office.
